

Laboratory

Dental technician laboratories

The aesthetic result of any treatment is intrinsically linked to the perfect work of the dental technician.

Detailed information about the dental laboratories

There are three German laboratories here in Marbella which are available to my surgery and which perform dental technician services quickly and to the highest quality.

In cases where it is necessary, and in cases which are aesthetically difficult, the dental technicians are also available in the surgery.

I work closely with the dental technicians in order to obtain the maximum quality and precision from the laboratory work.

In this way the customer receives a service from the dental technician which has the best possible combination of strength

and natural appearance.
